ABOUT RIIFO

RIIFO is a leading multinational corporation, providing one-stop piping solutions applied in residential, commercial, agricultural, industrial, and infrastructural sectors. Persistently reinventing since 1996, with over 8,000 employees, 70 branches & subsidiaries, and 300,000 distributors, we have served customers in more than 100 countries and regions.

With an integrated value chain, from R&D to manufacturing and retail distribution, we strive to fulfill our mission of offering ideal piping products and services for all environments.

countries & regions

70

Branches & Subsidiaries

INNOVATION

Believing that innovation is the key to go beyond the ordinary, RIIFO has founded world-class labs recognized and certified by CNAS. Over 600 innovation talents are sparing no effort to challenge industrial boundaries, achieving 923 patents and 20 technology awards.

And this innovative passion has translated perfectly into high-quality products and excellent service. We strive to provide ideal piping solutions for everyone.

SCALE

We adopt highly automated production lines with the most rigorous and comprehensive production controls, and management systems in order to handle such a powerful production.

Facility

9

global production bases

5,200+

Capacity

Production Capacity

- Pipe: 3.2 billion m/yr
- Fitting: 1.3 billion pcs/yr

Storage Capacity

- 1,735,000 m³ ≈ 61,950 TEU (20 GP Containers)

RIIFO APPROVALS

RIIFO adhere to the concept of quality priority,all RIIFO products are produced under rigorous quality control with excelsior manufacturing. Until now,RIIFO has gained over 50 certificates, for example

- NSF (certification of public health standards, USA)
- DVGW (certification for products for water and gas, Germany)
- AENOR (standardization and quality certification for companies, Spain)
- WRAS (certification for connections against leaks, residues, good function, pollution, UK)
- WATERMARK (health and safety certification, Australia)

These certificates worldwide underline our technical and quality know-how, and we can provide you with 25 years system warranty backed up by an international insurance company.

GAS PIPING SYSTEM

MULTILAYER PIPES FOR GAS

Multilayer Gas Pipe

The application of multilayer pipes is increasing year by year, not only in residential field, but also in industrial and engineering fields. Compared with traditional pipes, multilayer pipes have excellent performance in air tightness test, longer lifetime and, the most importantly, reasonable price.

The RIIFO piping system consists of multilayer pipes, fittings and brass valves. It is applicable to conduction of Natural Gas (GN) and Liquefied Petroleum Gas (LPG), offering perfect solution for the conveying of gas for residential, commercial, and industrial use.

Advantages

High flexibility and inherent stability

Flame retardancy/ Self-extinguish ability

Ultraviolet resistance

Light in weight

Indelible laser printing

Corrosion resistant

PRESS FITTING-F5

Technical Data

Working Temperature: -20°C ~ 60°C
Maximum Working Pressure:10 bar

Standard

- UNE 53008.1
- ISO 18225
- ISO 17484

Certificates

Composition

Advantages

- U pressing profile
- Reliable and easy to install
- Nickel plated contributes to good corrosion resistance
- Excellent sealing performance with double O-ring
- The stress and risk of cracking is eliminated by the annealing process
- Machined by special horizontal machining centers, with surface finish degree of no more than Ra3.2μm

COMPRESSION FITTING-F1

INSTALLATION

INSTALLATION

Step 1: Pipe cutting

Cut the pipe vertically and precisely with RIIFO pipe cutter.

Step 2 Pipe beveling and calibration

Use RIIFO reamer to bevel and calibrate the pipe. Insert the reamer completely inside the pipe. Rotate the reamer in one direction for several times to form a round pipe end.

Step 3: Pipe inserting into fitting

Insert the pipe into the sleeve, until it reaches the plastic gasket. Check it through the inspection holes on the sleeve. It is important to ensure the pipe is completely inserted into the fitting.

Step 4: Pressing

Put the fitting under the right position of the jaw. Press the fitting until the jaw is fully closed. The press jaw must be placed close to the plastic gasket.

Step 5: Checking

Checking the jaw when the pressing procedure is done.

ATTENTION

- 1 Choose the right size fitting according to the pipe and make sure accessories completed and without any damage before installation.
- 2 Make sure the cross section is smooth and not be seriously inclined (as shown in the figure), severe incline will push the O-ring seal and cause the leakage.
- 3 When beveling the pipe, make sure no burrs in the pipe.
- 4 Insert the pipe horizontally with fitting, incline and violent insert are not allowed.
- 5 Arrange pressure test after installing the pipe system, the system installation is qualified if it keeps the pressure for a while and no any leakage.
- 6 Anti-UV Measure
When placing pipes in areas exposed to UV light, it would be better to cover the pipe with UV-resistant materials, such as RIIFO anti-UV corrugated pipes or PVC casing, etc. Synthetic fabrics like nylon and polyester do a good job of blocking UV. Do not install directly under UV light without protection.
- 7 Buried laying protection
When buried laying of the multi-layer pipes, it needs to be protected by a corrugated pipe.

WARRANTY

RIIFO offers a maximum guarantee of 25 years for the Gas products. For detailed documentations of product warranty, please contact us.
